- Recommendations and Takeaways

A misty forest scene with a waterfall and tall evergreen trees. The waterfall is the central focus, cascading down a rocky cliff. The surrounding forest is dense with tall, dark evergreen trees. The mist is thick and white, creating a soft, ethereal atmosphere. The lighting is diffused, with a warm, golden glow from the sun filtering through the trees. The overall mood is serene and majestic.

INTRODUCTION |

INTRODUCTION

This research effort and subsequent analysis on behalf of the Mt. Hood and Columbia River Gorge Tourism Alliance consists of a resident survey with statistically significant results that addresses resident sentiment towards tourism in relation to key issues the communities within the region are currently facing. Throughout the report, the Mt. Hood and Columbia River Gorge area is referred to as the “Region”.

Topics were wide-ranging and diverse. Including:

- Road congestion/transit options
- Workforce housing
- Diversity, Equity, and Inclusion
- Impacts from climate change
- Cost of living/Living wage
- Local houselessness
- Vibrant main streets
- Recreation use
- Quality of Life as a resident
- Experience economy
- Sentiment about lodging & short-term rentals

RESEARCH METHODS

OVERVIEW

- RRC worked alongside MT. Hood and Columbia River Gorge Tourism Alliance to develop a survey instrument that would resonate with respondents and be tailored to the needs of answering questions regarding tourism sentiment in the region.
- Upon development of the survey instrument, the survey research was conducted using two methods:
 - A *statistically valid* survey with Invites sent via mail (also referred to as Invite sample).
 - An *Open Link* survey available to anyone with the interest to participate, distributed via Mt. Hood and the Columbia River Gorge's marketing (referred to as Open Link sample).
- Data was collected and analyzed using a variety of RRC's software, tabulated, and then formatted to display throughout this.
- Given the very successful response rate for this survey project, the data is considered representative at the regional level for the study.
 - Open Link data is also presented for comparison, as these individuals often highlight specific motivations for answering the survey compared to that of the statistically valid respondents. However, decision-making should lean towards using the statistically valid sample as the Open Link is not considered fully representative despite results being very similar.

RESEARCH METHODS

THE STATISTICALLY VALID SURVEY

- The statistically valid paper surveys were mailed to a stratified random sample of residential address in the Mt. Hood & Columbia River Gorge Region within the boundaries of the map on the right.

RESEARCH METHODS

THE STATISTICALLY VALID SURVEY

- Options to respond to the statistically valid survey were:
 - Via mail-back paper surveys included with the original mailing to each household.
 - Links to an online survey from included QR codes in the cover letter which used individual passwords to limit responses to 1 per household.
- Survey response was very strong, with 1,435 completed surveys for the Invite sample.
 - The margin of error in results in +/- 2.6%, indicating a small margin of potential error in either direction.
- Once the statistically sample was collected, the survey was opened to the public via an “open-link”.
 - This was promoted through local media channels from the corresponding communities.
 - A total of 361 Open link responses were collected overall for all communities.

QUALITY OF LIFE

IMPORTANCE/SATISFACTION

In the graph below, average importance and satisfactions ratings are compared to demonstrate areas that may need more attention.

- This is determined by those categories which have a higher importance rating than satisfaction.
- The “Needs Met” column details the importance/satisfaction discrepancy and may serve as an avenue to judge the priority of addressing the public’s concern regarding the various survey topics.

A scenic view of a waterfall cascading over moss-covered rocks in a lush forest. The waterfall is the central focus, with water falling into a pool below. The surrounding area is covered in dense green foliage and moss, creating a vibrant and natural setting. The text "CURRENT TOPICS IN THE REGION" is overlaid on the bottom right of the image in a bold, white, sans-serif font. A vertical yellow line is positioned to the right of the text.

Source: RRC

LIKELIHOOD TO RECOMMEND

How likely are you to recommend the Mt. Hood/Columbia River Gorge Region to your family and friends as a place to visit? (Scale: 0 = Extremely unlikely to 10 = Extremely likely)

Source: RRC

NET PROMOTER SCORE

A Net Promoter Score (NPS) in a Resident Sentiment Survey tells local decision makers how satisfied residents are with their living community. It's determined by asking residents: "On a scale of 0 to 10, how likely are you to recommend living here to others?" The score is calculated by taking the percentage of residents who love living there (score 9-10) and subtracting the percentage who are unhappy (score 0-6). The result, ranging from -100 to +100, helps local decision makers understand if residents are happy and identify areas for improvement.
